

PauseAm integration evidence

Ask before you pay. | NAIC 2026 / PS2 | 3 October 2026

PauseAm uses official English ASR to transcribe payment questions and the N-ATLaS text model to check the relevance of reviewed guidance. Users correct and confirm the transcript before requesting next steps. Authenticated model services run on SecretVM, behind the website backend.

Evidence artefacts

[Integration report](#)

Architecture, model identities, adapters, configuration and screenshots.

[Live request logs and response samples](#)

Ten engineering checks, including four N-ATLaS text requests with model revision, trace IDs and measured latency.

[Authenticated model-host requests](#)

Six text requests completed in 6,141-6,754 ms, alongside two input guards.

[English ASR checks](#)

Model identity, transcript privacy policy and audio-error responses.

[Operating application screenshot](#)

The English Speak / Type interface on the deployed application.

[Reproducible verification script](#)

Checks model readiness, pinned identity, real requests and timing.

Model versions

English ASR: NCAIR1/NigerianAccentedEnglish

Revision: 3c52c6e6c9ec508014a7b9db6a42b503b8930dff

Text: NCAIR1/N-ATLaS

Revision: e294476928aca9030e924ca27bb8e085e8581273

Runtime: llama.cpp, Q4_K_M quantized official weights.

Live app: pauseam.theblockcapitol.com
